

WATER JACKET TYPE PERSONAL INCUBATORS

The reliability of digital control and water-jacket

PERSONAL CO₂ INCUBATOR
MULTI GAS INCUBATOR

APC-30D
APM-30D

● Excellent temperature stability

Water-jacket and digital PID control minimize the influence of outside temperature changes.

● High-performance digital controls:

CO₂ and O₂ concentrations (Multigas model), chamber temperature and door heater are all digitally controlled, making setting, adjustment and calibration easy.

● Automatic setup function

Automatic Setup Function makes setup easier than ever. At startup, ASF will automatically calibrate the CO₂ zero adjustment and reach the set temperature and CO₂ concentration.

● Compact design

The compactness provides heating efficiency and ease of use. It saves space (only a 410 x 400mm footprint) and is easy to move. A second Personal Incubator can be stacked on top to expand capacity.

● Accommodate up to 112 petri dishes (60mm)

Shelves hold 16 60mm petri dishes each. Three shelves are standard and 4 more may be installed for 112 60mm petri dish capacity.

● Safety against contamination

Shelves and shelf holders can be removed without any tools, saving time and hassle for cleaning and sanitation.
